

MANDATE: INLINE PREVIEW PLAYERS & DYNAMIC PACKAGE ARCHITECTURE

Layout and Typography Mandate: Must ensure that the font size across this interactive listing block is globally scaled upward by exactly 10% using clean layout CSS variables. This maintains the elite macOS inspired minimalist aesthetic across all viewports. Absolutely no horizontal line separators or long underscore characters are permitted anywhere within this architectural code.

Fluid UI Interaction Rule (Haptic Fluid Motion Engine): The new inline audio preview players and conditional inventory rows must be fully integrated into our spring physics animation framework. When a user hovers over an audio playback trigger, it must smoothly illuminate with a glassmorphic color coded glow. Clicking play must trigger a haptic feedback response and a crisp click user interface sound asset. Provide a clean master toggle switch inside the global navigation bar allowing immediate system wide muting of all user interface sound assets at any time.

Strict Mandatory Linking Directive: Every bolded phrase below represents a high value semantic SEO anchor. You are required to wrap every bold block in an active, instantly routing hyperlink pointing to the designated internal platform node (e.g., `<a href="/edm-ghostproduction-marketplace"><strong>edm ghostproduction marketplace</strong></a>`).

◀ 1. BONUS VERSIONS & INLINE AUDIO STREAMING

Layout Integration Rule: The track description must feature a dedicated section for bonus assets. Must implement an interactive waveform or streaming play button directly beside specific bonus tracks, allowing the buyer to listen to alternate mixes directly within the description interface without leaving the page.

Bonus Versions

- **Instrumental** (Free) with watermarked
- **Radio Edit** (Free) with watermarked
- **Extended Mix** (Free) [Interactive Playable Preview Option Renders Here] with watermarked

Extended Mix Preview: Next to the Extended Mix item, render a sleek, motion floatable play icon. When clicked, this must trigger an inline streaming audio preview of the extended track.

◀ 2. WHAT IS INCLUDED (COMPLETE PROFESSIONAL RELEASE PACKAGE)

Database Integration Rule: AUTOMATIC REASSIGN: DEPENDS UPON THE TRACK, THE EXACT PACKAGE DETAILS WILL BE SHOWN BELOW.

The layout engine must then render the high attention validation panel. The asset listings inside this block must be generated using dynamic database flags. If a producer did not provide a native project directory file or a lyric text PDF document during the track submission wizard, **the conditional backend script must hide those specific table rows automatically to prevent checkout discrepancies.**

DEPENDS UPON THE TRACK, THE PACKAGE DETAILS WILL BE THERE:

- ☒ **Row 1: MASTERED VERSION** (Always Visible Checkmark / Default State)
- ☒ **Row 2: UNMASTERED VERSION** (Always Visible Checkmark / Default State)

- ☒ **Row 3: STEMS Folder** (Always Visible Checkmark / Default State)
- ☒ **Row 4: MIDI Folder** (Always Visible Checkmark / Default State)
- ☒ **Row 5: Lyrics PDF Document** (Conditional State: Renders only if vocal_type == exclusive OR ai)
- ☒ **Row 6: License Ownership Transfer Agreement** (Always Visible Checkmark / Legal Default State)
- ☒ **Row 7: Project File ZIP Archive** (Conditional State: Renders only if project_file_exists == true)

MANDATE: MANDATORY GLOBAL SCHEMA ARCHITECTURE INTEGRATION

Strategic Objective Overview: You are strictly required to implement the comprehensive JSON-LD (JavaScript Object Notation for Linked Data) structured data block provided below.

PURPOSE: This macro-formatted architecture acts as the direct communication. By perfectly defining our organization, dynamic product catalogs, FAQ matrices, and audio streaming objects, this code forces the platform with massive visual Rich Snippets, Knowledge Graph panels.

INSTRUCTIONs FOR DYNAMIC SCHEMA INTEGRATION

The frontend and backend engineering teams must execute the following three integration steps flawlessly to ensure Google validates the payload without errors.

1. **Exact Location Protocol:** Inject the provided code block directly inside the `<head>` tag of the main homepage root template (e.g., `index.html`, `_app.js`, or the global layout wrapper). It must load instantly upon the first server render.
2. **Dynamic Database Variable Sync:** Do not leave the catalog pricing variables static. You must bind the `priceCurrency`, `lowPrice`, `highPrice`, and `offerCount` fields under the `@type: Product` node directly to the live server database. When new tracks are added or purchased, these specific metrics must automatically update in the DOM so Google crawls accurate, real-time marketplace availability.
3. **Strict Code Integrity:** Copy the exact code block provided below. Do not alter the syntax format, remove trailing commas, or break the curly bracket closures, as this will instantly fail Google's Rich Results validation tests and drop indexing rank.

NOW integret this Architecture

Instructions for Schema Integration:
